 3.2 POSSIBLE PROBLEMS AND KNOWN ERRORS.....2

 3.3 CHANGES AND CORRECTIONS SINCE 2.3.0.0.....2

4. NOTES.....3

1. SYSTEM OVERVIEW

CIIL is a middleware solution that exposes the ICSF 452X JM, JMV, TMS and TMSV API sets from a C2PC 6.0.2 injector. This solution enables NT COE segments developed against the ICSF 452X APIs to run in a non-COE, non-ICSF environment. When installed on C2PC, various ICSF and installed segment menus will be interleaved with the C2PC menus. A user account that does not run AFW can be configured in the NT COE environment to aid performance. This will prevent some of the ICSF processes from running.

2. REFERENCED DOCUMENTS

1. CIIL FAQ located on the CDROM.
2. CIIL 2.2.0.0 SVD.
3. CIIL 2.3.0.0 SVD.

3. VERSION DESCRIPTION

3.1 Inventory of Materials Released

Magnetic media. CIIL Version 2.3.0.1 is released on a CD-ROM intended for the Intel PC hardware environment. The installation of CIIL Version 2.3.0.1 is packaged as a standard Microsoft MSI installation as well as a NTCOE Segment. The CIIL Version 2.3.0.1 CD supports installation of CIIL Version 2.3.0.1 on the Windows 2000 operating systems and COE Kernel 4.2.0.9 or higher and ICSF 4520P7 or higher.

Installation CD Contents

MSI Windows Installation Files:

1. Autorun.inf – instructions for which program to automatically start after the CD has been inserted in the CDROM drive (assuming the computer is configured to autorun CDs).
2. Data1.cab – archive file containing the source files for installation.
3. C2PC ICSF Interface Layer.msi – Microsoft Windows installer configuration file.
4. Setup.exe – File that launches the Microsoft Windows Installer based installation.
5. CIIL Installshield Install Instructions. PDF.
6. CIIL NT COE Install Instructions. PDF

7. CIIL.pdf – boiler plate text for user guide use.
8. CIIL FAQ.pdf – useful information on CIIL.
9. CIIL_2_2_0_0.pdf – 2.2.0.0 SVD – software version description.
10. CIIL_2_3_0_0.pdf – 2.3.0.0 SVD
11. CIIL_2_3_0_1.pdf – 2.3.0.1 SVD

NTCOE Segment files:

1. CIIL#COTS#2.3.0.1#PC.001
2. DIIHeader
3. Distrib
4. TOC.01

3.2 Possible Problems and Known Errors

The following items are known issues with C2PC 6.0.0.0/ICSF and have been identified to the developers for resolution:

1. MGRS is unable to convert positions containing 90 deg N/S. This results in C2PC crashing when a track with this position enters the system and is selected by the user.
2. ICSF CME TDAs Quick CPA and Quick Intercept produce incorrect results.

3.3 Changes and Corrections since 2.3.0.0

1. Changed misspelling of Warnging to Warning.
2. Fixed JmMilPolygon API translation. C2PC was rendering the start and end points backwards from the way ICSF renders them.
3. Documentation was updated with COE-M Test Lab feedback.
4. Documentation is now delivered as Adobe Portable Document Format files instead of Microsoft Word files.

4. NOTES

1. You must rename the initial map that comes up with C2PC to “System.”. This map **MUST** be open when the FOTC injector is started.
2. CIIL is unable produce certain key binds for ICSF segments directly. In order to enable this functionality, use the following alternative key strokes as indicated:

Control Left Click – hold down the c key and left click

Shift Left Click – hold down the s key and left click

Double Left Click – hold down the d key and left click
3. The CIIL injector activation is **NOT** complete until the “start” button that appears at the top of the CIIL injector pane is pressed.
4. You must start Trackplot and connect to the C2PC Gateway prior to starting the CIIL injector.
5. When using an ICSF segment that displays images on C2PC, the image is not auto-activated; you must go to the C2PC map manager and “activate” the image to cause it to be displayed.
6. You can run CIIL as a non-Administrator user, but you cannot change the menus to the “Test Menu Filter” or reset them to the “Release Menu Filter” unless you are running CIIL with an account with 'Administrator' privileges.
